Whatever it takes.

Process technology training provides valuable information for industrial engineering firm

One of our training sessions

Personal Development Hours Certificate Training

We also provide a PDH (personal development hours) Certificate upon completion of the training.

“I knew some of these types, but it was new exposure for me on the other half of the list” – Todd Hess, Vice President and Senior Designer with Hess Engineering

Sometimes, the very solution you need for a complex process may involve a technology that you may never have heard of. Engineers are often called upon to design complicated systems in industrial and municipal processes that require a specific type of pump or piece of equipment.

That’s where R.A. Ross & Associates can help!

We’ve put together a training module covering the various types of pump technologies available today and the typical applications they are best suited for. We provided our Process Technology class during a “lunch and learn” at the well-respected firm of Hess Engineering (formerly A.J. Hess & Associates) in Calvert City, KY. Hess Engineering has been around since 1984 and provides civil, mechanical, electrical, chemical engineering and project management services in Western Kentucky and surrounding areas.

Contact us today to set up your class and see what you might be missing!

Some of the types of pumps covered in our training class:

AODD PUMPS

MULTI-STAGE PUMPS

CENTRIFUGAL/DYNAMIC

SELF PRIMING PUMPS

END SUCTION PUMPS

SPLIT CASE PUMPS

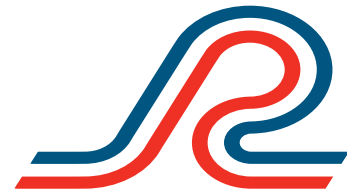

Not all pumps are built for the same application. We'll be glad to go over the applications that are perfect for each type of pump.

We can also provide training for blowers, vacuum and filters that could result in significant savings for you!

CONTACT US

Call us for information on how we can help solve your problems in any of the following areas:

- ▶ Pumps
- ▶ Blowers
- ▶ Filters
- ▶ Mixers
- ▶ Tanks
- ▶ Vacuum Pumps
- ▶ Mechanical Seals
- ▶ Heat Exchangers
- ▶ Repairs
