Ratings: A: Excellent - can and is being used successfully; B: Moderate Resistance - Proceed with Caution; C: Should not be used; V: Varies by chemical type or formulation; —: Insufficient information.

The information in this guide is offered as a general aid for selecting the appropriate pump materials of construction. It has been compiled from sources we believe to be reliable however no guarantee is made or implied. Corrosion rates vary widely depending upon concentration, temperature and the presence of trace elements in the process liquid. The pump user should be knowledgable with the chemicals and operating conditions of the application and is responsible for the final material selection. Chart is based on pumped fluid temperature of 70°F maximum.

Ratings: A: Excellent - can and is being used successfully; B: Moderate Resistance - Proceed with Caution; C: Should not be used; V: Varies by chemical type or formulation; —: Insufficient information.

The information in this guide is offered as a general aid for selecting the appropriate pump materials of construction. It has been compiled from sources we believe to be reliable however no guarantee is made or implied. Corrosion rates vary widely depending upon concentration, temperature and the presence of trace elements in the process liquid. The pump user should be knowledgable with the chemicals and operating conditions of the application and is responsible for the final material selection. Chart is based on pumped fluid temperature of 70°F maximum.
